

Final Project Report

Internship: Upskill Campus - Data Science & Machine Learning
Name: Nitish Kumar

Project Overview

This report summarizes work completed during Weeks 1 to 4, including project planning, environment setup, implementation of core functionality, testing, debugging, optimization, and documentation.

Objectives

Understand requirements, set up the development environment, implement core modules, integrate components, test features, and document progress.

Technologies Used

Python, Pandas, NumPy, Scikit-learn, Jupyter Notebook, GitHub.

Week 1

Requirement analysis, project planning, development environment setup, technology research, and project structure creation.

Week 2

Implemented initial modules, integrated components, performed testing, and resolved initial bugs.

Week 3

Enhanced functionality, optimized performance, integrated modules, and improved stability.

Week 4

Worked on core features, tested modules, fixed bugs, improved code quality, documented progress, and updated the project repository.

Challenges Faced

Integration issues, debugging challenges, configuration problems, and performance optimization.

Lessons Learned

Improved debugging, software testing, planning, documentation, and problem-solving skills.

Future Scope

Complete remaining development, improve model performance, and prepare deployment.

Conclusion

The internship strengthened practical knowledge of the machine learning development lifecycle through planning, implementation, testing, optimization, and documentation.
